

Junior Drawing

Age-level: Junior

Pillar: Life Skills

Badge Description: Learn techniques to make your drawings even better.

1. Experiment with different materials.
 - Pick three different materials to create art with, like pencils, colored pencils, or crayons. Then, pick an object to draw using the three different ways you chose to create art!
2. Learn how to add shading.
 - Create your own line design using shading. Shading is a major part of drawing. Depending on the light, items appear lighter or darker. Showing the darker areas is shading. Shading adds depth, and makes the picture look more real. Use the [Line Designs with Shading activity](#) to help you master the art of shading.
3. Get some perspective.
 - How would an object look if you were a bug? Draw a picture showing what a bug would see if they were looking at an object (i.e. a flower, grass, a sandwich, etc.). Fill your entire paper, since a bug would see everything as super huge!
4. Use your imagination like a graphic artist.
 - Design your own cartoon. You can sketch out the details from head to toe, and you can include any silly details you want—a talking dog, a funny hat, etc.
5. Make your own masterpiece—and show it off!
 - Use the skills you learned to make your very own masterpieces, then show them off in an art gallery in your own home!
